

Pure Rutin Powder (Human Grade)

Pure Rutin Powder is commonly known as a bioflavonoid. The three most common bioflavonoids used are rutin, quercetin, and hesperidin. They are derived from a plant source. The most expensive one is rutin and this is the bioflavonoid that has produced the best results to help horses that bleed. The way this product works is that it has a binding/thickening effect on the substance which holds the capillary wall together. This increases the capillary efficiency as a biologic filter. It essentially acts as a cement to seal up the capillary walls and thereby reducing/eliminating equine bleeding in race horses. By doing this, you increase your horses overall performance and improve earnings potential.

Ingredients:

97.5% (27,661 mg/oz) Pure Rutin NF

Feeding Instructions:

Feed one tablespoon daily (scoop enclosed). Each tablespoon serving delivers 13,831mg.
